Mobility Grants for IPSL-CGS Students

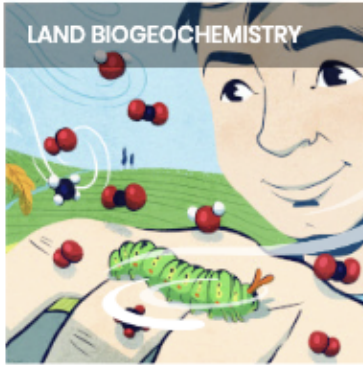

Every year, EUR IPSL – Climate Graduate School launches a mobility grant for Masters students in Climate and Environmental Sciences to promote international openness. This initiative aims to support M1 or M2 students in their projects abroad by encouraging internships related to the research themes of the EUR IPSL-CGS (see [IPSL Research Themes](#)) with a grant of €500 per month. There are two calls for applications each year: the first in September for M1 and M2 students (internships of 3 to 6 months) and the second in February for M1 students (internships of up to 3 months). A local tutor affiliated with an IPSL laboratory must be involved in the project (co-supervising or not). This grant may be combined with other grants as long as the rules governing those grants also permit it.
